<b>Date</b>	<b>For</b>	<b>Qty</b>	<b>Description</b>	<b>Price</b>	<b>Discount</b>	<b>Net Price</b>
05-14-21	NCSU Dancin In	1	Dexamethasone Injection			15.00
05-14-21		1	Uniprim Powder 200grams			31.34
05-14-21		1	Swelling Between Front Legs/Ultras			75.00

Dancin has a seroma located behind her right elbow as a result of chronic tissue irritation from how she lays down. Her heels rub on the skin behind her elbow which has resulted in a "leaky vessel" causing it to weep serum between the tissue layers resulting in a small fluid pocket. The pocket was clipped, cleaned and examined via ultrasound and diagnosed as a seroma today. It was then drained with an 18g needle. 10cc of serum fluid were pulled off and discarded. Dancin was given a shot of steroid for swelling and you were instructed to use topical DMSO to finish drawing out any remaining fluid. In addition Dancin was placed on antibiotics to prevent infection.

It is likely that our treatment may be ineffective to completely resolve Dancin's seroma as often times an opening, lavage, curretting and simple closure have to be performed to stop the "leaky vessel". We chose to perform a conservative procedure today to prevent surgery if at all possible. If you find that over the next week Dancin's seroma returns I recommend that you return for surgical correction. This surgery can be performed at any time as this medical condition is not life threatening nor is it resulting in lameness or pain.

Please reach back out with any questions or concerns.

PVH is currently recommending that any horse exposed to other horses thru shows, trail

rides, or other equine functions be vaccinated against Influenza and Rhinopneumonitis every 3 months and Strangles once a year. In addition, if you anticipate buying a horse from anywhere and bringing it onto your property, we suggest your horses be vaccinated against these respiratory diseases prior to such a purchase.

Thank you for using Pineview Veterinary Hospital for your large animal needs. We offer emergency services, however, for situations that require surgical procedures or intensive care, we refer to NCSU College of Veterinary Medicine in Raleigh, NC.
