Patient ID:	260682	Exam:	EQ TARSUS RIGHT 870
Pet Name:	SNOSWISHINAGOODTIME(GIGI)	Acc#:	404825
Surname:	SIDWA	Exam Date:	05/25/2021
DOB:	04/22/2018	Status:	FINAL
Species:	EQUINE	Clinician:	KIM YOUNG
Secondary Acc#:		Affiliation:	Equine Internal Medicine Resident
Breed:	QUARTER HORSE	2nd Clinician:	
Gender:	FEMALE		

History:

Assessment:

1. Moderate cellulitis and emphysema of the soft tissues around the right tarsus with an adjacent cutaneous lesion consistent with trauma. There is no definitive evidence of joint involvement.

Report:

Radiographic examination of the right tarsus. 4 images available performed 5/25/2021.

There is moderate soft tissue thickening centered around the tarsus and extending proximally through the included distal crus, being worse dorsally and medially. Interspersed within the swollen soft tissues are numerous tracking gas opacities between fascial planes. Along the dorsomedial cutaneous margin of the proximal metatarsus there is a focal defect consistent with a wound. There is no visible gas definitively present within the tarsal joint capsule, and the underlying osseous structures are normal.
